1. What is DIGITRACKER?

A remote-workforce management platform for agencies and distributed teams — everything a manager needs to see who's working, what they're working on, and how the business is running.

DIGITRACKER gives managers complete visibility over remote and hybrid staff without micromanaging: live time tracking, periodic screen captures, task and KPI accountability, leave management, HR document storage, and payroll — all in one workspace.

Each company using DIGITRACKER operates inside its own isolated **workspace** (called a "sub-account"). Every workspace has its own users, data, plan, and billing — nothing is ever visible across workspaces.

Who it's for

- **Agencies** managing distributed contractors or offshore staff across time zones.
- **SMEs** running hybrid or fully remote teams that need accountability without spreadsheets.
- **Any team** that wants daily accountability — time, tasks, and performance — built into the workflow instead of chased manually.

What's included, at a glance

Live Time Tracking

Clock in/out with a heartbeat that keeps hours accurate even if the browser closes unexpectedly.

Screen Capture Audit

Automatic screenshots between the 11th–18th minute of each working session.

Leave & Time Off

Five leave types, in-app requests, one-click approvals, and admin balance adjustments.

Tasks & KPIs

Assign work, set daily KPI targets, and require updates before clocking out.

HR Documents

Secure per-employee document storage, with an audit archive when someone leaves.

Payroll

Configurable payroll settings, generated pay runs, and downloadable payslips.

Reports

Attendance, hours, and productivity reporting for Admins and opted-in Managers.

Digi5y AI-CRM

Optional integration that mirrors your CRM contacts in as potential team members.

2. How to Subscribe

Signing up takes two steps: choose a plan, then tell us about your company. No card required for the Free plan.

- 1 **Go to the subscribe page.** Visit digitracker-app.digi5y.co/#/subscribe (or click "Sign In" → "Subscribe" from the homepage).
- 2 **Choose your plan and billing cycle.** Pick Free, Standard, Business, or Professional, and Monthly or Annual billing. Pricing and seat limits are shown live on the page in your local currency.
- 3 **Enter your company details.** Company name, your name, and your work email — this becomes the first Admin account for your workspace.
- 4 **Review and confirm.** Double-check the plan and price, then submit.
- 5 **Pay (paid plans only).** You're redirected to a secure Stripe Checkout page to enter payment details. Free-plan workspaces skip this step entirely and activate immediately.
- 6 **Check your email.** You'll receive an order confirmation and an **account activation link** — this is how you set your password and access your new workspace for the first time.

PLAN TIERS

Free — small teams getting started (time tracking, 7-day screenshots, basic reports). **Standard** — adds Calendar, Leave, Tasks & KPIs, 30-day screenshots. **Business** — adds HR Documents, advanced reports, and the Digi5y AI-CRM integration. **Professional** — adds custom branding, higher seat limits, and priority support. Exact pricing and seat counts are always shown live on the subscribe page.

Trials

Some paid plans include a free trial period, shown on the subscribe page before you pay. Your workspace is fully usable during the trial; you'll be billed automatically when it ends unless you cancel from Settings → Subscription first.

3. Setting Up Your Account

The activation link from your signup email is a one-time step. After that, sign in with your email and password whenever you need DIGITRACKER. This section covers activating your login, then configuring both your workspace and your own profile in detail.

Activating your login

- 1 **Open the activation email** and click "Activate Your Account."
- 2 **Set your password.** This becomes your permanent DIGITRACKER login.
- 3 **You're in.** You land on your workspace's Time Tracking dashboard as the Admin.

FORGOT YOUR PASSWORD?

Use "Forgot password" on the sign-in page. You'll get a reset link by email — the same secure flow used for the original account activation.

A. Configure your workspace (Settings → Account)

As the Admin, these settings apply company-wide — every user in your workspace sees them.

FIELD	WHERE	WHAT IT DOES
Company Logo	Account → Company Branding	Upload a PNG, JPG, or SVG (up to 2 MB). It replaces the "DIGITRACKER" wordmark in the header for everyone in your workspace, so the app looks like your own product.
Company Name	Account → Company Branding	Shown alongside (or instead of) the logo in the header. Leave blank to keep the default "DIGITRACKER" label.
Work Timezone	Account → Workspace Settings	Sets the reference timezone your whole workspace runs on — calendars, leave dates, and report date ranges all follow this. Choose the timezone closest to where most of your team (or your business operations) is based.
Sub-account Code & Application URL	Account (read-only)	Your workspace's unique identifier and sign-in URL — useful reference information if you contact support.

- 1 Go to **Settings → Account**.
- 2 Under **Company Branding**, click the logo tile to upload your logo, and enter your Company Name.
- 3 Set your **Work Timezone** from the dropdown (covers major regions — e.g. Singapore, Malaysia, Philippines, India, UAE, UK, US).
- 4 Click **Save**. Changes apply immediately for every user in the workspace.

B. Set up your own profile (Settings → My Profile)

Every user — Admin, Manager, or Staff — has their own profile with personal and employment details.

FIELD	WHAT IT'S FOR
Profile Photo	Shown next to your name across the app.
Phone Number & Country	Your contact number and country, used for HR records and localized display (date formats, public holidays).
Address	Address line 1 & 2, city, and postal/pin code — kept on file as part of your employment record.
Emergency Contact	A name and phone number your employer can reach in an emergency.
Reporting Hours	Your expected start and end time each day — this is what your daily hours are measured against on the dashboard.

- 1 Go to **Settings → My Profile**.
- 2 Upload a photo, and fill in your phone number, country, and address.
- 3 Add an emergency contact name and phone number.
- 4 Confirm your reporting hours (your Admin may have already set a default for you).
- 5 Click **Save**.

APPEARANCE IS PERSONAL

Settings → Appearance lets you choose Light, Dark, or System theme, plus an accent color — this is a personal preference only and doesn't change what your teammates see. It's separate from the Company Branding logo/name set by your Admin in Section A above.

4. Adding Users & Roles

Only Admins can add users. Each new user is invited by email and sets their own password — Admins never need to share or manage passwords for their team.

- 1 Go to **Settings → Users & Roles**.
- 2 Click **+ Add User**.
- 3 Enter their name, work email, role, reporting schedule, and country.
- 4 Save — an invite email with a secure sign-in link is sent automatically.
- 5 The new user clicks the link, sets a password, and signs in.

Didn't receive the invite? Re-send it any time from the user's row in Users & Roles. You can also suspend, reactivate, or edit any user from the same screen.

Roles & permissions

ROLE	CAN DO
Staff	Clock in/out, submit tasks and KPI updates, request leave, view their own reports and documents.
Manager	Everything Staff can do, plus approve leave and view team status/reports for their direct reports (downline).
Admin	Everything above, plus manage users, departments, payroll, subscription/billing, workspace settings, and integrations for the whole workspace.

SEATS

Your plan determines how many active users your workspace can have. Upgrade any time from Settings → Subscription if you need more seats.

5. Time Tracking & Screenshots

The home screen for every user — clock in, see your day's progress, and (for Admins/Managers) see the whole team's live status.

For every user

- 1 **Clock In** from the dashboard when you start work.
- 2 A heartbeat keeps your session accurate in the background — no action needed while you work.
- 3 Use **Start Lunch / End Lunch** to pause tracking for a break without clocking out entirely.
- 4 **Clock Out** when you finish for the day. Your hours and progress toward your daily target are shown automatically.

AUTOMATIC IDLE PROTECTION

If a session shows no real activity for more than 40 minutes while marked "working" (lunch excluded), DIGITRACKER automatically clocks that session out so recorded hours stay accurate.

Screenshots

Where enabled by your Admin, DIGITRACKER automatically captures one screenshot at a random point between 11 and 18 minutes into each working session — proof-of-work built into the workflow, with no manual uploads. Free-plan workspaces retain screenshots for 7 days; paid plans retain 30 days. Admins and Managers can review the team's screenshots from the **Screenshots** page.

For Admins & Managers

The dashboard's live team panel shows every team member's current status (working, on lunch, or offline), hours logged, and last heartbeat — updated in real time with no page refresh.

6. Calendar, Leave & Time Off

Staff request time off; Managers and Admins approve it with one click. Balances update automatically.

Requesting leave (Staff)

- 1 Go to **Leave & Time Off**.
- 2 Click **New Request**, choose a type, dates, and (for partial days) hours.
- 3 Attach supporting documents if needed (e.g. a medical certificate).
- 4 Submit — your Manager/Admin is notified automatically.

Leave types

TYPE	TYPICAL USE
Annual	Standard paid vacation leave, drawn from the employee's annual leave balance.
Medical	Sick leave, usually with a supporting document.
Time-off	Shorter, ad-hoc personal time off.
PH / Off-in-Lieu	Public holiday swaps or compensating time off.
Other	Anything that doesn't fit the categories above, with a reason noted.

Approving leave (Manager/Admin)

Open the request from Leave & Time Off or your notifications, review the details, and Approve or Decline. Admins can also edit, backdate, or credit/debit leave balances directly for a user — useful for correcting historical records or handling manual arrangements.

Calendar

The Calendar page shows a team-wide view of approved leave and public holidays, so Managers can plan coverage at a glance.

7. Tasks & KPIs

Accountability built into the daily workflow — not a separate project-management tool to remember to check.

Tasks

- **Create a task** from the Tasks page — title, description, due date, and one or more assignees.
- **Attach files** and leave comments directly on a task for context.
- **Track status** as tasks move from open to in-progress to done.

KPIs

Admins set daily KPI targets for staff. Staff submit their KPI update for the day — Admins can require this submission before a user is allowed to clock out, keeping daily accountability consistent without manual chasing.

Performance Points (-10 to +10)

Alongside KPI targets, Managers and Admins can log a **Performance Point** rating for any staff member, for any specific working day. It's a fast way to record something that happened — good or bad — while it's still fresh, so it isn't forgotten by the time a formal review comes around.

- 1 Go to **KPIs** and select the staff member to rate.
- 2 Pick the day being rated — the current week is shown Monday to Friday, with any existing rating for each day visible at a glance.
- 3 Drag the rating slider from **-10** (Poor) through **0** (Neutral) to **+10** (Excellent).
- 4 Add a short note stating exactly what justifies the score — this is what turns a number into a documented, defensible record.
- 5 Click **Save Points**. The day's rating is recorded immediately, and the week's running total updates automatically. A saved rating can be edited later if needed.

SCORE RANGE	MEANING	EXAMPLE OF WHAT JUSTIFIES IT
-10 to -1 Negative	Points deducted for a specific incident or performance issue on that day.	Missed a deadline without notice, repeated lateness, incomplete or low-quality work, a policy or client-facing mistake. The more serious the incident, the closer to -10.
0 Neutral	An ordinary day — nothing notable to record either way.	Most days for most staff, if nothing specific needs to be logged.
+1 to +10 Positive	Points awarded for a specific incident or strength shown on that day.	Proactively resolved a client issue, exceeded a KPI target, helped a teammate, delivered ahead of schedule. The stronger the impact, the closer to +10.

STAFF CAN SEE THIS

A negative rating is visible to the staff member themselves — their own dashboard shows a running "Perf. Points (week total)" card. Always write the note as a clear, factual description of the incident, since the employee will read it. Over time, these daily entries build a documented performance history that's useful for reviews, coaching conversations, or resolving disputes.

8. HR Documents & Message Board

Secure file storage for HR records, and a shared space for team-wide announcements.

HR Documents

Admins and staff can upload and organize employee documents (contracts, certificates, IDs) in one secure, per-workspace store. When an employee leaves, an Admin can generate a downloadable archive snapshot of their records before their account is removed, preserving a compliant audit trail.

Message Board

A simple, company-wide feed for announcements and updates — visible to everyone in the workspace from the main dashboard, with optional images attached to a post.

9. Reports

Attendance and productivity data, ready to review or export.

Admins have Reports access by default; Managers can be opted in per workspace. Reports cover attendance, hours worked versus target, and leave usage across the team or by individual, over a selectable date range.

10. Payroll

Configure once, then generate a pay run each period with payslips ready to share.

- 1 **Configure payroll settings** under Settings → Payroll — pay period, cut-off dates, and any standard deductions or allowances.
- 2 **Add bank details** for each employee under Settings → Bank Details (each user can also add their own).
- 3 **Generate a payroll run** for the period — DIGITRACKER pulls in each employee's tracked hours, leave, and any manual adjustments.
- 4 **Review and finalize** the run.
- 5 **Share payslips** — each employee can view and download their own payslip once a run is finalized.

11. Settings — Account, Security & Subscription

Everything about you and your workspace lives under Settings.

TAB	WHAT IT'S FOR
My Profile	Your own name, photo, and contact details.
Appearance	Theme and (on eligible plans) workspace branding.
Security	Change your password and review account security.
Bank Details	Payout details used for payroll.
Payroll	Your own payslip history (Staff) or full payroll configuration (Admin).
Account (<i>Admin</i>)	Company name, default working hours, and workspace-wide preferences.
Users & Roles (<i>Admin</i>)	Invite, edit, suspend, or remove team members.
Departments (<i>Admin</i>)	Group staff for reporting and organization.
Subscription (<i>Admin</i>)	Current plan, seats, billing cycle, and upgrade/cancel options.
Digi5y AI-CRM (<i>Admin</i>)	Connect or disconnect your CRM integration (see Section 12).
Archive (<i>Admin</i>)	Records preserved from offboarded employees.

12. Digi5y AI-CRM Integration

Available on Business and Professional plans — connect your workspace to the Digi5y AI-CRM to mirror contacts in as potential team members.

- 1 Go to **Settings** → **Digi5y AI-CRM Integration**.
- 2 Click **Connect** and authorize the connection from your CRM account.
- 3 Once connected, contacts from your CRM location sync in automatically as they're created or updated.
- 4 Use **Refresh** any time to manually re-sync, or **Disconnect** to revoke access immediately.

DATA STAYS ISOLATED

Connecting the integration only shares data within your own workspace — it does not expose your DIGITRACKER data to other CRM accounts, and disconnecting stops all further data flow immediately. See the full [Privacy Policy](#) for details.

13. Getting Help

We're happy to help with setup, billing, or anything in between.

- **Email support** — admin@digi5y.co
- **Product site** — digitracker.digi5y.co
- **Sign in** — digitracker-app.digi5y.co
- **Privacy Policy** — digitracker.digi5y.co/digitracker_privacy_policy
